

## CO-MANAGED IT

# Co-Managed IT

Security-first IT support for organizations that already have internal IT but need additional capacity, tools, coverage or specialized security guidance.

Co-Managed IT is a separate path for companies that already have internal IT resources. Digerati Experts can support the internal team with security operations, assessments, projects, endpoint and device programs, vendor coordination, documentation or escalation coverage without replacing the client's existing IT function.

### ENGAGEMENT MODEL

## Co-managed

Scoped by responsibility boundaries, systems, approvals and escalation paths.

### BEST FIT

Organizations with an internal IT person or team that needs security expertise, extra capacity, projects, tools or structured oversight.

### PRIMARY OUTCOME

A stronger internal IT function with outside support, security guidance and operational backup.

## 01 Who owns what

### Your internal IT

Day-to-day owner where assigned

Daily operations  
you already run

Approvals for  
assigned systems

Authority boundaries defined before work starts · responsibility matrix · escalation map

### Digerati Experts

Specialized roles, by scope

Security assessment  
and roadmap

Threat detection  
and escalation

Backup, BCDR and  
recovery planning

Project  
execution

The boundary is agreed in writing before work starts; roles shown are the common ones, and each engagement is scoped.

## 02 What this model is for

- Supporting internal IT without creating confusion over ownership.
- Adding specialized security, compliance, backup, secure access or project execution capacity.
- Creating documented roles so internal staff, leadership and Digerati Experts know who owns what.

## 03 Common co-managed roles

- Security assessment and remediation roadmap support.
- SOC and threat detection coordination and incident escalation.
- Backup, BCDR and recovery planning support.
- Project execution for onboarding, network, identity, device or cloud initiatives.

---

## 04 Operating rules

- Authority boundaries are defined before work starts.
  - Client internal IT remains the day-to-day owner where assigned.
  - Digerati Experts may drop-ship pre-provisioned devices, coordinate remote setup or act as a specialized service provider, depending on scope.
- 

---

## 05 Where it fits

- Works as a standalone engagement or as a parallel path to the ProActive Ecosystem levels.
  - Best when leadership wants maturity and security without removing the existing internal IT relationship.
  - Not a substitute for full IT ownership unless the client chooses to move into a ProActive Ecosystem package.
- 

---

## 06 Typical deliverables

- 01 Responsibility matrix
  - 02 Escalation map
  - 03 Security assessment and roadmap
  - 04 Project plan or recurring support model
  - 05 Documentation and governance cadence
- 

### NEXT STEP

## Schedule a Cyber Risk Assessment

Confirm the right service level, required controls and implementation roadmap for your environment.
